manufacturing a product is not difficult the difficulty consists in manufacturing a product of high quality at a low cost and rapidly drastic technological advances are changing global markets very rapidly in such conditions the ability to compete successfully must be based on innovative ideas and new products which has to be of high quality yet low in price one way to achieve these objecti ves would be through massive investments in research of computer based technology and by applying the approaches presented in this book the first international conference on advanced manufacturing systems and technology amst87 was held in opatija croatia in october 1987 the second international conference on advanced manufacturing systems and technology amsv90 was held in trento italy in lune 1990 the third fourth fifth and sixth conferences on advanced manufacturing systems and technology were all held in udine italy as follows amst93 in april 1993 amst96 in september 1996 amst99 in june 1999 and amst02 in june 2002

the farming and agri food sectors are faced with an increasing demand by consumers for high quality products the current major questions are thus how to define quality and how to increase the quality of animal products to satisfy these new requirements this is the reason why the cattle commission of the european association of animal production eaap organised a specific session on this topic at its annual meeting which was held in bled slovenia in september 2004

this session dealt with the manipulation and evaluation of bovine milk and meat composition and quality with various indicators commercial physical biochemical molecular or other these indicators are any method biological trait or physical property which may be useful to predict a quality trait quality includes sensory traits nutritional properties of products their ability to be processed and also any consideration about traceability genetic geographic or nutritional traceability thus the full spectrum of quality attributes are discussed indicators may also be considered as predictors in this respect contributors discussed the detection early in life of the ability of animals to produce meat or milk of high quality indicators may also be useful for consumers when they buy meat or milk as official or commercial signs of quality all the review papers and the short communications which were presented in this session will be in this eaap publication entitled indicators of milk and beef quality additional papers either presented in 2003 in the eaap annual meeting or from invited authors were added to complete the publication

this book is an original first approach to quantum physics the core of modern physics it

combines the competence of a well known researcher in quantum information science and the freshness in style of two high school students quantum physics is known to be challenging for two reasons it describes counter intuitive phenomena and employs rather advanced mathematics the description of traditional quantum phenomena the structure of atoms and molecules the properties of solids the zoology of sub atomic particles does indeed involve the whole formalism however some other striking phenomena somehow the most typically quantum ones can be described using only high school mathematical skills this approach exploits this fact thus making it possible for a beginner to tackle mind boggling experiments like teleportation and the violation of bell s inequalities and practice notions like superposition entanglement and decoherence

this is a selection of papers from the 14th international conference on historical linguistics held august 9 13 1999 at the university of british columbia from the rich program and the many papers given during this conference the present twenty three papers were carefully selected to display the state of current research in the field of historical linguistics

the financial times best books of the year this absorbing collective biography of the genius nobel family reveals how the nobels business and personal lives were fundamentally intertwined with the histories of sweden and russia as well as the economic and entrepreneurial development of europe in the long 19th century the name nobel is mainly associated with the nobel prize however alfred nobel was only one of a family of conspicuously gifted individuals the nobels who moved from sweden to russia in the 1830s ran one of russia s biggest machine factories and founded the russian oil industry using thousands of nobel family letters and other documents shared here for the first time bengt jangfeldt provides a fascinating and authoritative multi generational chronicle charting the family exploits the author describes how the father immanuel nobel a polymath architect inventor and engineer set the family on a path to financial success amidst a backdrop of imperial russian industrial growth he tells the story of how immanuel s sons robert and ludvig and his grandson emanuel developed the family business into a powerful industrial empire with a progressive agenda in the fields of worker s welfare profit sharing and charity when the revolution struck in 1917 the family s industrial empire as well as their huge personal wealth were swept away in one go as a result they had to flee the country where they had been active for 80 years and return to sweden during a time of immense change in russia and right across europe the story of the nobels stands out as one of both brilliance and resilience with family firmly at its heart

this book focuses on the performance of mobile robots through the use of multi hierarchical symbolic representations of the environment to perform deliberative actions a robot must possess some symbolic representation of its workspace but representations of real environments can become so large that they must be conveniently arranged to facilitate and in some cases make possible their use practical solutions tested on real robots for example a robotic wheelchair are provided

recent years have been characterized by the increasing amount of publications in the field of so called ill posed problems this is easily understandable because we observe the rapid progress of a relatively young branch of mathematics of which the first results date back to about 30 years ago by now impressive results have been achieved both in the theory of solving ill posed problems and in the applications of algorithms using modern computers to mention just one field one can name the computer tomography which could not possibly have been developed without modern tools for solving ill posed problems when writing this book the authors tried to define the place and role of ill posed problems in modern mathematics in a few words we define the theory of ill posed problems as the theory of approximating functions with approximately given arguments in functional spaces the difference between well posed and ill posed problems is concerned with the fact that the latter are associated with discontinuous functions this approach is followed by the authors throughout the whole book we hope that the theoretical results will be of interest to researchers working in approximation theory and functional analysis as for particular algorithms for solving ill posed problems the authors paid general attention to the principles of constructing such algorithms as the methods for approximating discontinuous functions with approximately specified arguments in this way it proved possible to define the limits of applicability of regularization techniques

this book presents a comprehensive review of the methods and approaches being adopted to push forward the boundaries of computational catalysis
