1 The idea behind the workshop was that of calling attention to the necessity of studying long term tendencies in economic growth we believe that actual growth processes in capitalistic economies are not smooth phenomena and also that the evolution of the economy is characterized by long term fluctuations as well as by trade cycles it is now common place to argue that this point of view was revived after 1973 in consequence of the economic difficulties experienced by industrialized countries while it has a much older origin as its roots can be pushed back at least to the great depression of the 1930s in preparing this workshop we selected two main approaches as reflected in the title of this book that have been proposed in the last ten years to deal with the causes of long term fluctuations namely the technological or neo Schumpeterian approach and the social approach what follows is simply a rough characterization of the existing theoretical positions and it is not meant to be an exhaustive one the interested reader will immediately see that there are many differentiated positions by looking at the arguments contained in each contribution
