syntactic dependencies are often non local they can involve two positions in a syntactic structure whose correspondence cannot be captured by invoking concepts like minimal clause or predicate argument structure relevant phenomena include long distance movement long distance reflexivization long distance agreement control non local deletion long distance case assignment consecutio temporum extended scope of negation and semantic binding of pronouns a recurring strategy pursued in many contemporary syntactic theories is to model cases of non local dependencies in a strictly local way by successively passing on the relevant information in small domains of syntactic structures
