the social constructionist perspective has revolutionized the way that social scientists investigate social problems constructing social problems spector and kitsuse 1977 2001 offered the guiding statement of the approach which both transformed and revitalized the sociology of social problems propelling it into a quarter century of exciting and innovative empirical research john kitsuse and malcolm spector challenged conventional approaches to the field they insisted on treating social problems as social constructions as the products of claims making and constitutive definitional processes the purpose of this book is to highlight contemporary challenges to the social constructionist perspective on social problems in 1993 two collections of essays reconsidering social constructionism debates in social problems theory holstein and miller 1993 and constructionist controversies issues in social problems theory miller and holstein 1993 brought a wide variety of constructionist challenges into focus challenges and choices attempts to distill these debates and offers some compelling suggestions for how challenges may be met and where constructionist studies might proceed in the future while each of the essays in this volume deeply appreciates the constructionist approach each of them points to issues and choices that social constructionists must confront if the perspective is to continue to be a vital part of ongoing debates on social problems the essays critique previous constructionist formulations make suggestions for advancing expanding or diversifying the constructionist agenda and challenge the perspective to move in new directions they remind us that social constructionism is an ongoing not a finished product and the essays point to some of the choices available to social constructionists in moving their projects into new even uncharted territories james a holstein and gale miller are professors in the department of social and cultural sciences at marquette university

designs in nanoelectronics often lead to challenging simulation problems and include strong feedback couplings industry demands provisions for variability in order to guarantee quality and yield it also requires the incorporation of higher abstraction levels to allow for system simulation in order to shorten the design cycles while at the same time preserving accuracy the methods developed here promote a methodology for circuit and system level modelling and simulation based on best practice rules which are used to deal with coupled electromagnetic field circuit heat problems as well as coupled electro thermal stress problems that emerge in nanoelectronic designs this book covers 1 advanced monolithic multirate co simulation techniques which are combined with envelope wavelet approaches to create efficient and robust simulation techniques for strongly coupled systems that exploit the different dynamics of sub systems within multiphysics problems and which allow designers to predict reliability and ageing 2 new generalized techniques in uncertainty quantification uq for coupled problems to include a variability capability such that robust design and optimization worst case analysis and yield estimation with tiny failure probabilities are possible including large deviations like 6 sigma 3 enhanced sparse parametric model order reduction techniques with a posteriori error estimation for coupled problems and for uq to reduce the complexity of the sub systems while ensuring that the operational and coupling

parameters can still be varied and that the reduced models offer higher abstraction levels that can be efficiently simulated all the new algorithms produced were implemented transferred and tested by the eda vendor magwel validation was conducted on industrial designs provided by end users from the semiconductor industry who shared their feedback contributed to the measurements and supplied both material data and process data in closing a thorough comparison to measurements on real devices was made in order to demonstrate the algorithms industrial applicability
