during the successive reprints of the first edition of this work published in 1871 i was able to introduce several important corrections and now that more time has elapsed i have endeavoured to profit by the fiery ordeal through which the book has passed and have taken advantage of all the

criticisms which seem to me sound i am also greatly indebted to a large number of correspondents for the communication of a surprising number of new facts and remarks these have been so numerous that i have been able to use only the more important ones and of these as well as of the more important corrections i will append a list some new illustrations have been introduced and four of the old drawings have been replaced by better ones done from life by mr t w wood i must especially call attention to some observations which i owe to the kindness of prof huxley given as a supplement at the end of part i on the nature of the differences between the brains of man and the higher apes i have been particularly glad to give these observations because during the last few years several memoirs on the subject have appeared on the continent and their importance has been in some cases greatly exaggerated by popular writers i may take this opportunity of remarking that my critics frequently assume that i attribute all changes of corporeal structure and mental power exclusively to the natural selection of such variations as are often called spontaneous whereas even in the first edition of the origin of species i distinctly stated that great weight must be attributed to the inherited effects of use and disuse with respect both to the body and mind i also attributed some amount of modification to the direct and prolonged action of changed conditions of life

various approaches have been developed to evaluate the consequences of spatial structure on evolution in subdivided populations this book is both a review and new synthesis of several of these approaches based on the theory of spatial genetic structure françois rousset examines sewall wright s methods of analysis based on f statistics effective size and diffusion approximation coalescent arguments william hamilton s inclusive fitness theory and approaches rooted in game theory and adaptive dynamics setting these in a framework that reveals their common features he demonstrates how efficient tools developed within one approach can be applied to the others rousset not only revisits classical models but also presents new analyses of more recent topics such as effective size in metapopulations the book most of which does not require fluency in advanced mathematics includes a self contained exposition of less easily accessible results it is intended for advanced graduate students and researchers in evolutionary ecology and population genetics and will also interest applied mathematicians working in probability theory as well as statisticians

providers and consumers have to deal with variants of software services which are alternative instances of a services design implementation deployment or operation this work develops the service feature modeling language to represent software service variants and a suite of methods to select variants for development or delivery an evaluation describes the systems implemented to make use of service feature modeling and its application to two real world use cases
