business statistics uses current real world data to equip students with the business analytics techniques and quantitative decision making skills required to make more thoughtful information based decisions in today s workplace helping the student understand business analytics and the role that business statistics plays in it the book has infused the language of business analytics along with its definitions approaches and explanations throughout the text continuing the tradition of presenting and explaining business statistics using clear complete and student friendly pedagogy this international edition includes new chapter cases reinforcing the vibrancy and relevance of statistics in addition topical changes have been made in select chapters and problems have been revised in all the chapters

provides a contemporary summary of the physiology and pathophysiology of the manipulative and exploratory functions of the human hand

although digenetic trematodes have been largely neglected they constitute a major group of helminths that parasitize human and animals causing significant morbidity and mortality this is of special importance today since the geographical limits and the populations at risk traditionally limited to developing or low income countries are currently expanding and changing in relation to factors such as growing international markets improved transportation systems and demographic changes this has led to a growing international interest in trematode infections although factors such as the difficulties entailed in the diagnosis the complexity of human and agricultural practices the lack of assessments of economic costs or the limited number of effective drugs are preventing the development of control measures of these diseases in humans and livestock in depth studies are needed to clarify the current epidemiology of these helminth infections and to identify new and specific targets for both effective diagnosis and treatments the main goal of the third edition of this book is to present the major trematodes and their corresponding diseases in the framework of modern parasitology considering matters such as the application of novel techniques and analysis of data in the context of host parasite interactions and also with the resident microbiota showing the application of modern techniques and concepts to the studies on digenetic trematodes this is an ideal book for parasitologists microbiologists zoologists immunologists public health professionals clinicians and graduate and post graduate students

government scrutiny and intensified oversight have dramatically changed the landscape of education in recent years observers want to know how schools compare which district is best which states are spending the most per student on education whether reforms are making a difference and why so many students

are failing some of these questions require technical answers that educators historically redirected to outside experts but the questions leveled at all educators have become so acute and persistent that they can no longer be outsourced this text helps educators develop the tools and the conceptual understanding needed to provide definitive answers to difficult statistical questions facing education today

food plays an essential part in everyday life food should be tasty healthy sustainable and preferably not too expensive but food should also be safe and with sufficient guarantees on maintaining good quality aspects until the end of shelf life the various actors in the food supply chain have an interest in verifying the expected quality and safety by means of microbiological analyses of food measurement brings knowledge and microbiological guidelines help in the decision making process for judging the acceptability of food or food production processes the present handbook provides microbiological guidelines and current applicable eu legal criteria status 11 2018 for a wide range of food categories dairy meat seafoods plant based foods bakery products composite foods shelf stable food water and subcategories therein based upon the type of food processing and intrinsic characteristics of the foods this book can be consulted to provide quick answers on the expected microbiological contamination of foodstuff it can help in interpretation of test results in assessing good hygienic practices in the production of food determining the shelf life and ensuring food safety the handbook also presents definitions of the wide variety of foodstuffs available and some reflections on in particular food safety issues or the on going debate for some food items in assessing microbial quality this book provides crucial information about food safety for the use of students and professionals extract first we eat then we do everything else m f k fisher food plays an important part in everyday life but when being a food scientist or in the food business food gets to be an even bigger part of your life our team at the food microbiology and food preservation research group fmfp ugent at ghent university during its academic tasks in education research scientific activities at committees but also in interaction with many food companies and stakeholders in the food supply chain in projects or contract work has built up considerable expertise on the microbiological analysis of a large variety of foodstuffs being situated in ghent and thus close to brussels the heart of europe we intrinsically have to understand and deal with legal eu criteria or action limits the latter is the reason why this book is mainly oriented towards inclusion or making reference to eu legal microbiological criteria for foodstuffs as well about the authors the main author prof mieke uytendaele leads together with prof frank devlieghere the food microbiology and food preservation research group fmfp ugent at ghent

university belgium her teaching and research area covers aspects of microbiological analysis of foods food safety and food hygiene she has built over twenty years of experience by executing initiating and coordinating various projects in this research discipline dealing with sampling and testing to collect baseline data on the microbial contamination of foods looking into the virulence of food borne pathogens elaborating challenge testing to study the behavior of food borne pathogens all this information serves as an input for quality assurance and microbial risk assessment to support food safety decision making and setting microbiological criteria she was is the promotor of more than 25 ph d students including eu and non eu citizens throughout her career prof uyttendaele has published more than 270 peer reviewed scientific papers authored several book chapters and presented at numerous international conferences workshops throughout the years she has also used her scientific expertise in interpretation of test results for analyses obtained in routine monitoring or analysis executed at the food service lab at fmfp ugent

helminths are long lived multicellular organisms that have co evolved with humans over many thousands of years they are responsible for infections which affect around one third of the human population at global level despite the huge efforts in research during the last years effective control of helminth infections is still far from optimal standards and the resulting diseases remain neglected this book aims to give an up date overview to the epidemiology including molecular typing specific biological immunological and immunopathological aspects diagnosis and perspectives of control of the most common helminth infections

this book addresses the major neglected tropical diseases ntds based on their prevalence and the years of healthy life lost to disability in latin american and caribbean countries these include chagas disease leishmaniasis hookworm infection and other soil transmitted helminth infections followed by dengue schistosomiasis leishmaniasis leprosy cysticercosis bartonellosis plasmodium vivax malaria and onchocerciasis topics like disease burden major manifestations and approaches to the control and elimination of ntds in latin america and the caribbean are discussed in detail as such the book will be of general interest to basic researchers and clinicians engaged in infectious disease tropical medicine and parasitology and a must have for scientists specialized in the characteristics of this region of the world

a comprehensive assessment of the methodologies of thermodynamic optimization exergy analysis and thermoeconomics and their application to the design of efficient and environmentally sound energy systems the chapters are organized in a sequence that begins with pure thermodynamics and progresses towards the blending of thermodynamics with other disciplines such as heat transfer and cost accounting three methods of analysis stand out entropy generation minimization exergy or availability analysis and thermoeconomics the book reviews current directions in a field that is both extremely important and intellectually alive additionally new directions for research on thermodynamics and optimization are revealed

light scattering technology for food property quality and safety assessment discusses the development and application of various light scattering techniques for measuring the structural and rheological properties of food evaluating composition and quality attributes and detecting pathogens in food the first four chapters cover basic concepts principles theories and modeling of light transfer in food and biological materials chapters 5 and 6 describe parameter estimation methods and basic techniques for determining optical absorption and scattering properties of food products chapter 7 discusses the spatially resolved measurement technique for determining the optical properties of food and biological materials whereas chapter 8 focuses on the time resolved spectroscopic technique for measuring optical properties and quality or maturity of horticultural products chapter 9 examines practical light scattering techniques for nondestructive quality assessment of fruits and vegetables chapter 10 presents the theory of light transfer in meat muscle and the measurement of optical properties for determining the postmortem condition and textural properties of

muscle foods and meat analogs chapter 11 covers the applications of spatially resolved light scattering techniques for assessing quality and safety of animal products chapter 12 looks into light scattering for milk and dairy processing chapter 13 examines the applications of dynamic light scattering for measuring the microstructure and rheological properties of food chapter 14 shows the applications of a biospeckle technique for assessing the quality and condition of fruits and vegetables chapter 15 provides a detailed description of raman scattering spectroscopic and imaging techniques in food quality and safety assessment chapter 16 the final chapter focuses on applications of light scattering techniques for the detection of food borne pathogens

this research topic is devoted to arm and hand movement in health as well as in several disease conditions it is a collection of several original research papers and reviews clinical case studies hypothesis and theory articles opinions commentaries and methods papers that cover some important aspects of the topic from distinct scientific perspectives we invite the readers to appreciate the range in methodologies and experimental designs that together have led to widen our understanding of this especially broad field of research

motor control translating research into clinical practice 6th edition is the only text that bridges the gap between current and emerging motor control research and its application to clinical practice written by leading experts in the field this classic resource prepares users to effectively assess evaluate and treat clients with problems related to postural control mobility and upper extremity function using today s evidence based best practices this extensively revised 6th edition reflects the latest advances in research and features updated images clinical features and case studies to ensure a confident transition to practice each chapter follows a consistent straightforward format to simplify studying and reinforce understanding of normal control process issues age related issues research on abnormal function clinical applications of current research and evidence to support treatments used in the rehabilitation of patients with motor control problems
