there has been a historical discord over curriculum and teaching practices for structures courses in architectural education as students are disinterested and not able to integrate learnings from such courses into their design solutions the research in the book structures in architecture education teaching and integrating in design involves the development of an assessment tool by a comparative analysis of past frameworks to understand integration that assesses three dimensions of integration of structures performance physical and visual against three building systems exterior interior and services around 27 30 samples are selected for each year from first to fourth from three institutions data for pedagogy and curriculum are also collected that is used to analyse the results from assessment of samples in the second part of this book structural equation modelling is used to analyse if the studio is the preferred mode of learning structures

user interfaces ui of applications since about 2010 are usually implemented by dedicated frontend programs following a rich client architecture and are based on the technologies html css and javascript this approach provides great flexibility and power but comes with an inherent great overall complexity of uis running on a continuously changing technology stack this is because since over twenty years technologies still progress at an extremely high invention rate and unfortunately at the same time still regularly reinvent part of their self this situation is harmless for small uis consisting of just a handful dialogs and having to last for just about one or two years however it becomes a major hurdle for large uis consisting of a few hundred dialogs and having to last for five

or more years this is especially the case for the complex use of industrial business information systems the main scientific contribution of this dissertation is the hierarchical user interface component architecture which a scalable software architecture for rich client based user interfaces it is primarily based on the important architecture principle separation of concerns so the derived idea of hierarchical composition the invented design pattern model view controller component tree mvc and the existing concepts presentation model and data binding

several nano scale devices have emerged that are capable of analysing plant diseases nutrient deficiencies and any other ailments that may affect food security in agro ecosystems it has been envisioned that smart delivery systems can be developed and utilised for better management of agricultural ecosystems these systems could exhibit beneficial multi functional characteristics which

could be used to assess and also control habitat imposed stresses to crops nanoparticle mediated smart delivery systems can control the delivery of nutrients or bioactive and or pesticide molecules in plants it has been suggested that nano particles in plants might help determine their nutrient status and could also be used as cures in agro ecosystems further to enhance soil and crop productivity nanotechnology has been used to create and deliver nano fertilizers which can be defined as nano particles that directly help supply nutrients for plant growth and soil productivity nano particles can be absorbed onto clay networks leading to improved soil health and more efficient nutrient use by crops additionally fertilizer particles can be coated with nano particles that facilitate slow and steady release of nutrients reducing loss of nutrients and enhancing their efficiency in agri crops although the use of nanotechnology in agro ecosystems is still in its early stages and needs to be developed further nano particle mediated delivery systems are promising solutions for the successful management of agri ecosystems in this context the book offers insights into nanotechnology in agro ecosystems with reference to biogenic nanoparticles it highlights the occurrence and diversity of biogenic nanoparticles mechanistic approach involved in the synthesis of biogenic nanoparticles synthesis of nanoparticles using photo activation and their fate in the soil ecosystem potential applications of nanoparticles in agricultural systems application and biogenic synthesis of gold nanoparticles and their characterization impact of biogenic nanoparticles on biotic stress to plants mechanistic approaches involved in the antimicrobial effects and cytotoxicity of biogenic nanoparticles role of biogenic nanoparticles in plant diseases management relevance of biological synthesized nanoparticles in the longevity of agricultural crops design and synthesis of nano biosensors for monitoring pollutants in water soil and plant systems applications of nanotechnology in agriculture with special refer to soil water and plant sciences a useful resource for postgraduate and research students in the field of plant and agricultural sciences it is also of interest to researchers working in nano and biotechnology

this book focuses on new and emerging data mining solutions that offer a greater level of transparency than existing solutions transparent data mining solutions with desirable properties e g effective fully automatic scalable are covered in the book experimental findings of transparent solutions are tailored to different domain experts and experimental metrics for evaluating algorithmic transparency are presented the book also discusses societal effects of black box vs transparent approaches to data mining as well as real world use cases for these approaches as algorithms increasingly support different aspects of modern life a greater level of transparency is sorely needed not least because discrimination and biases have to be avoided with contributions from domain experts this book provides an overview of an emerging area of data mining that has profound societal consequences and provides the technical background to for readers to contribute to the field or to put existing approaches to practical use
