the american institute of iranian studies is devoted to fostering research in the field of iranian studies and promoting scholarly exchange between the united states and iran this collection of essays addresses the history and development of iranian studies in the united states and the pivotal role of the institute in furthering research in the field the purview of the institute is vast covering iranology the study of iranian peoples and cultures both within and across regions of central and south asia and the middle east where various forms of the persian

language are spoken in keeping with the institute's dedication to facilitating research in Iran. The chapters in this volume represent fields of inquiry that have benefited from direct access to materials in the country. The essays describe the founding and work of the institute, the emergence of Iranian studies in American universities, the *Encyclopaedia Iranica*, early archaeological research in Iran by the University of Pennsylvania and the University of Chicago, the birth and development of American museum collections of art from Iran, and case histories of areas of Iranian studies that have been the traditional focus of institute-sponsored research, including art history, history, philology, religion, and sociology. The contributors to this volume are Ahmad Ashraf Shiva, Balaghi Medhi, Bozorgmehr Elton, Daniel Erica Ehrenberg, Carl W. Ernst, Stephen C. Fairbanks, Prudence O. Harper, Linda Komaroff, Judith A. Lerner, Franklin D. Lewis, Beatrice Forbes Manz, Alessandro Pezzati, Holly Pittman, D. T. Potts, Richard I. Speer, Mathew W. Stolper, Keyvan Tabari, and Christopher Thorne.

Due to complex phytochemical components and associated beneficial properties, numerous medicinal and aromatic plants in whole or parts have been used for nutritional purposes or the treatment of various diseases and disorders in humans and animals. Essential oils from medicinal and aromatic plants have been exploited for product formulations of pharmaceuticals, cosmetics, food, and beverage colorants, biopesticides, and several other utility chemicals of industrial importance. There is scientific evidence of many medicinal plant extracts possessing immunomodulatory, immunostimulatory, antidiabetic, anticarcinogenic, antimicrobial, and antioxidant properties, thus demonstrating their traditional use in popular medicine. With the advent of modern technology, the exploitation of natural resources has exponentially increased in order to fulfill the demand of an increased human population with improved quality of life. The traditional agriculture and production-based supply of commodities is inadequate to meet the current demand. Biotechnological approaches are gaining importance to bridge the gaps in demand and supply. In the proposed book, medicinal and aromatic plant-based secondary metabolites have been discussed in terms of their therapeutic potential and industrial relevance. To discuss the qualitative and quantitative analysis of a range of medicinal and aromatic plants based on secondary metabolites, SMS bioprocess development for their extraction and bioseparation, a brief overview of their industrial relevance, various tissue culturing strategies, biotechnological approaches to enhance production scale-up strategies, management of residual biomass post-extraction of target SMS is central to the idea of the proposed book. A section will explore the verticals mentioned above. In the next section, the book addresses the approaches for conserving and improving medicinal and aromatic plant

genetic resources in the third section approaches to managing the post harvest crop residue and secondary metabolites extracted plant biomass will be thoroughly discussed the recent integration of artificial intelligence to improve medicinal and aromatic plant research at several levels including the development and employment of computational approaches to enhance secondary metabolite production tissue culture drug design and discovery and disease treatment will be included in the fourth section the book summarizes current research status gaps in knowledge agro industrial potential waste or residual plant biomass management conservation strategies and computational approaches in the area of medicinal and aromatic plants with an aim to translate biotechnological interventions into reality
