the fact that the montego bay convention has been only ratified by 37 states at present and that it will be some time before the 60 ratifications required by article 308 are achieved has not prevented states from acting in accordance with the rules drawn up by the conference close on one hundred states have established either exclusive economic zones broadly modelled on part v or 200 nautical mile fishery zones and drawn on the principles laid down for exploiting living resources although these laws have been formulated unilaterally by states international custom since the judgement by the international court of justice in the fisheries case of 18 december 1951 is derived from concordant national rules this shift began even before the conference ended and has been consolidated since then moreover the régime governing the sea bed beyond the limits of national jurisdiction defined by part xi which was the stumbling block of the conference is subject to transitional arrangements on the basis of two resolutions adopted in the conference s final act one providing for the establishment of a preparatory commission and the other on the preliminary activities of pioneer investors this two volume work an earlier edition of which appeared in french has been written by a team of experts of international renown it presents an analysis of the convention with an additional chapter on the legal régime governing underwater archaeological and historical objects

the design of formal calculi in which fundamental concepts underlying interactive systems can be described and studied has been a central theme of theoretical computer science in recent decades while membrane computing a rule based formalism inspired by biological cells is a more recent field that

belongs to the general area of natural computing this is the first book to establish a link between these two research directions while treating mobility as the central topic in the first chapter the authors offer a formal description of mobility in process calculi noting the entities that move links π calculus ambients ambient calculi and branes brane calculi in the second chapter they study mobility in the framework of natural computing the authors define several systems of mobile membranes in which the movement inside a spatial structure is provided by rules inspired by endocytosis and exocytosis they study their computational power in comparison with the classical notion of turing computability and their efficiency in algorithmically solving hard problems in polynomial time the final chapter deals with encodings establishing links between process calculi and membrane computing so that researchers can share techniques between these fields the book is suitable for computer scientists working in concurrency and in biologically inspired formalisms and also for mathematically inclined scientists interested in formalizing moving agents and biological phenomena the text is supported with examples and exercises so it can also be used for courses on these topics
