this book is a celebration of mathematical problem solving at the level of the high school american invitational mathematics examination there is no other book on the market focused on the aime it is intended in part as a resource for comprehensive study and practice for the aime competition for students teachers and mentors after all serious aime contenders and competitors should seek a lot of practice in order to succeed however this book is also intended for anyone who enjoys solving problems as a recreational pursuit the aime contains many problems that have the power to foster enthusiasm for mathematics the problems are fun engaging and addictive the problems found within these pages can be used by teachers who wish to challenge their students and they can be used to foster a community of lovers of mathematical problem solving there are more than 250 fully solved problems in the book containing examples from aime competitions of the 1980 s 1990 s 2000 s and 2010 s in some cases multiple solutions are presented to highlight variable approaches to help problem solvers with the exercises the author provides two levels of hints to each exercise in the book one to help stuck starters get an idea how to begin and another to provide more guidance in navigating an approach to the solution

the theory of elliptic partial differential equations has undergone an important development over the last two centuries together with electrostatics heat and mass diffusion hydrodynamics and many other applications it has become one of the most richly enhanced fields of mathematics this monograph undertakes a systematic presentation of the theory of general elliptic operators the author discusses a priori estimates normal solvability the fredholm property the index of an elliptic operator operators with a parameter and nonlinear fredholm operators particular attention is paid to elliptic problems in unbounded domains which have not yet been sufficiently treated in the literature and which require some special approaches the book also contains an analysis of non fredholm operators and discrete operators as well as extensive historical and bibliographical comments the selected topics and the author s level of discourse will make this book a most useful resource for researchers and graduate students working in the broad field of partial differential equations and applications

this book is intended to offer a theoretical support and a practical guide to understand and use a wide set of quantitative tools for quality management the most common tools and methods are first explained and then applied in industrial examples basic statistics graphical approach pareto hypothesis testing anova doe control chart acceptance sampling are some of the covered topics the goal of this book is to provide the readers both with theory recall and examples of application to understand the approach and master the application thus the book is projected to be a useful resource for both students and practitioners in manufacturing and service operations students will find the ideal support and guidance for getting confident with the subject while practitioners will be provided with theoretical and practical insights to deeply understand the ground on which most of commonly used quality tools are built on the book will explain the topics

starting from the easiest to understand gradually increasing the level of complexity in the tools and in the numerical examples this third edition of the book has widened the theory support and re organized the topics this new organization will both support a deeper understanding of the statistical basics and facilitate the mastering of the more complex quality tools

large public projects represent major complex investment and whilst there has been much written about how to develop manage and deliver such projects practice still does not match up with expectations in this book researchers from the norwegian concept research programme explore the paradoxes between theory and practice in collaboration with experts in the field of project governance this book delves into the reality of large public projects to show how they can be managed effectively and efficiently recognising the realities of their context it offers a range of practical conclusions as to the paradoxes of the governance and management of public projects the international spectrum of authors draw their examples from the uk norway canada france australia and the netherlands bridging the gap between research theory and practice this book will benefit academics and researchers in the field of project management and corporate governance as well as those in the practice of public project governance civil servants and industry practitioners

since the publication of my book mathematical statistics shao 2003 i have been asked many times for a solution manual to the exercises in my book without doubt exercises form an important part of a textbook on mathematical statistics not only in training students for their research ability in mathematical statistics but also in presenting many additional results as complementary material to the main text written solutions to these exercises are important for students who initially do not have the skills in solving these exercises completely and are very helpful for instructors of a mathematical statistics course whether or not my book mathematical statistics is used as the textbook in providing answers to students as well as adding additional examples to the main text motivated by this and encouraged by some of my colleagues and springer verlag editor john kimmel i have completed this book mathematical statistics exercises and solutions this book consists of solutions to 400 exercises over 95 of which are in my book mathematical statistics many of them are standard exercises that also appear in other textbooks listed in the references it is only a partial solution manual to mathematical statistics which contains over 900 exercises

linear evolution equations in banach spaces have seen important developments in the last two decades this is due to the many different applications in the theory of partial differential equations probability theory mathematical physics and other areas and also to the development of new techniques one important technique is given by the laplace transform it played an important role in the early development of semigroup theory as can be seen in the pioneering monograph by rille and phillips hp57 but many new results and concepts have come from laplace transform techniques in the last 15 years in contrast to the classical theory one particular feature of this method is that functions with values in a banach space have to be considered the aim of this book is to present the theory of linear evolution equations in a systematic way by using the methods of vector valued laplace transforms it is simple to describe the basic idea relating these two subjects let A be a closed linear operator on a banach space X the cauchy problem defined by A is the initial value problem $u'(t) = Au(t)$ $u(0) = x$ where $x \in X$ is a given initial value if u is an exponentially bounded continuous function then we may consider the laplace transform $\int_0^\infty e^{-\lambda t} u(t) dt$ of u for large real

this book provides an introduction to the use of algebraic methods and symbolic computation for simple quantum systems with applications to large order perturbation theory it is the first book to integrate lie algebras algebraic perturbation theory and symbolic computation in a form suitable for students and researchers in theoretical and computational chemistry and is conveniently divided into two parts the first part chapters 1 to 6 provides a pedagogical introduction to the

important lie algebras $so(3)$, $so(2,1)$, $so(4)$ and $so(4,2)$ needed for the study of simple quantum systems such as the d dimensional hydrogen atom and harmonic oscillator this material is suitable for advanced undergraduate and beginning graduate students of particular importance is the use of $so(2,1)$ in chapter 4 as a spectrum generating algebra for several important systems such as the non relativistic hydrogen atom and the relativistic klein gordon and dirac equations this approach provides an interesting and important alternative to the usual textbook approach using series solutions of differential equations

the aim of the expositions is to present new and important developments in pure and applied mathematics well established in the community over more than two decades the series offers a large library of mathematical works including several important classics the volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question in addition they convey their relationships to other parts of mathematics the series is addressed to advanced readers interested in a thorough study of the subject editorial board lev birbrair universidade federal do ceará fortaleza brasil walter d neumann columbia university new york usa markus j pflaum university of colorado boulder usa dierk schleicher jacobs university bremen germany katrin wendland university of freiburg germany honorary editor victor p maslov russian academy of sciences moscow russia titles in planning include yuri a bahturin identical relations in lie algebras 2019 yakov g berkovich lev g kazarin and emmanuel m zhud characters of finite groups volume 2 2019 jorge herbert soares de lira variational problems for hypersurfaces in riemannian manifolds 2019 volker mayer mariusz urbański and anna zdunik random and conformal dynamical systems 2021 ioannis diamantis boštjan gabrovšek sofia lambropoulou and maciej mroczkowski knot theory of lens spaces 2021
