can we know that satan exists as a particular disembodied spirit current catholic teaching insists that satan exists as a person a fallen angel who has instigated the fall of humanity continues to influence humans today and constitutes a singular nemesis to god how one might ask could human beings know such a thing with certainty in response this book seeks to rescue the mythical language in which the doctrine of satan is rooted so that it is freed from the unreasonable expectation that it

affirms the existence of a particular creature and can instead express theological truth that is of relevance to all free willed creatures in doing so it addresses thorny questions concerning the interpretation of scripture the relationship between god and evil between doctrine and truth between the church and modernity and between the condemnatory impulses apparent in christian thought and the doctrine of an omnipresent god of infinite mercy the book detects in the doctrine of satan the expression of fundamental truths concerning the creator creature relationship truths that are too easily obfuscated in current formulations that invite either fundamentalism or incredulity

in a 1951 lecture turing alan 1951 turing argued it seems probable that once the machine thinking method had started it would not take long to outstrip our feeble powers there would be no question of the machines dying and they would be able to converse with each other to sharpen their wits at some stage therefore we should have to expect the machines to take control in the way that is mentioned in samuel butler s *erewhon* also in a lecture broadcast on the bbc turing alan 1951 he expressed the opinion if a machine can think it might think more intelligently than we do and then where should we be even if we could keep the machines in a subservient position for instance by turning off the power at strategic moments we should as a species feel greatly humbled this new danger is certainly something which can give us anxiety as interpreted by seth baum hubert dreyfus writes in general by accepting the fundamental assumptions that the nervous system is part of the physical world and that all physical processes can be described in a mathematical formalism which can in turn be manipulated by a digital computer one can arrive at the strong claim that the behavior which results from human information processing whether directly formalizable or not can always be indirectly reproduced on a digital machine dreyfus 1972 john searle writes could a man made machine think assuming it possible produce artificially a machine with a nervous system the answer to the question seems to be obviously yes could a digital computer think if by digital computer you mean anything at all that has a level of description where it can be correctly described as the instantiation of a computer program then again the answer is of course yes since we are the instantiations of any number of computer programs and we can think searle 1980
