the handbook of professional ethics for psychologists provides comprehensive coverage of topics typically neglected in books on ethical issues in psychology rather than take ethical pronouncements as dogma not to be questioned but simply understood and observed the authors encourage a questioning critical attitude divided into four parts this provocative text provides comprehensive coverage of foundational issues professional issues special topics and special populations a distinguished group of scholars and researchers examine moral reasoning and the ethics of professional licensing confidentiality in psychotherapy fees and financial arrangements the termination and referral of clients the use of deception in research ethnic minority issues and consent in the treatment and research of children the handbook of professional ethics for psychologists considers the compatibility of science and morality challenging readers to question the fundamental philosophical values of professional psychology the editors and contributors inspire the ethical impulse and encourage active moral leadership

the concept of compensation in psychology refers to processes through which a gap or mismatch between current accessible skills and environmental demands is reduced or closed these gaps can be principally the result of losses such as those associated with aging or interpersonal role changes injuries such as those that may occur to the neurological or sensory systems organic or functional diseases such as the dementias or schizophrenia and congenital deficits such as those apparent in autism or some learning disabilities whether the demand skill gaps can be bridged completely reduced only moderately or are impossible to close depends on a variety of factors in every case however the guiding notions of compensation are that some such deficits may be amendable the continuation of the effects of the gap may be avoidable and some functioning may be recoverable in this sense compensation is related to adaptation it is about overcoming deficits managing the effects of losses and promoting improvement in psychological functioning compensation is a concept that has a long and rich history in numerous domains of psychological research and practice to date however few of the relevant research domains have benefitted

explicitly or optimally from considering alternative perspectives on the concept of compensation although researchers and practitioners in several areas of psychology have actively pursued programs with compensation as a central concept communication across disciplinary divides has been lacking comparing and contrasting the uses and implications of the concept across neighboring and even not so adjacent areas of psychology can promote advances in both theoretical and practical pursuits the goal of this book is to carry inchoate integrative efforts to a new level of clarity to this end the editors have recruited major authors from selected principal areas of research and practice in psychological compensation the authors review the current state of compensation scholarship in their domains of specialization state of the art reviews of this rapidly expanding area of scholarship are therefore collected under one cover for the first time in this way a wide variety of readers who might otherwise rarely cross professional paths with one another can quickly learn about alternative preferences agendas and methods as well as novel research results interpretations and practical applications designed to contain broad deep and current perspectives on compensation this volume continues the processes of explicating the concept of compensation linking and distinguishing compensation from neighboring concepts describing the variety of compensatory mechanisms operating in a wide range of phenomena and illustrating how compensatory mechanisms can be harnessed or trained to manage losses or deficits and to promote gains or at least maintenance of functioning

this textbook is intended to give an introduction to neuroscience for students and researchers with no biomedical background primarily written for psychologists this volume is a digest giving a rapid but solid overview for people who want to inform themselves about the core fields and core concepts in neuroscience but don't need so many anatomical or biochemical details given in classical textbooks for future doctors or biologists it does not require any previous knowledge in basic science such as physics or chemistry on the other hand it contains chapters that do go beyond the issues dealt with in most neuroscience textbooks one chapter about mathematical modelling in neuroscience and another about tools of neuroscience explaining important methods the book is divided in two parts the first part presents core concepts in neuroscience electrical signals in the nervous system basics of neuropharmacology neurotransmitters the second part presents an overview of the neuroscience fields of special interest for psychology clinical neuropharmacology inputs outputs and multisensory processing neural plasticity in humans mathematical modeling in neuroscience subjective experience and its neural basis the last chapter tools of neuroscience presents important methodological approaches in neuroscience with a special focus on brain imaging neuroscience for psychologists aims to fill a gap in the teaching literature by providing an introductory text for psychology students that can also be used in other social sciences courses as well as a complement in courses of neurophysiology neuropharmacology or similar in careers outside as well as inside biological or medical fields students of data sciences chemistry and physics as well as engineering interested in neuroscience will also profit from the text

a complete course in data collection and analysis for students who need to go beyond the basics a true course companion the engaging writing style takes readers through challenging topics blending examples and exercises with careful explanations and custom drawn figures ensuring the most daunting concepts can be fully understood
