following in the wake of his groundbreaking work war in the age of intelligent machines manuel de landa presents a brilliant radical synthesis of historical development of the last thousand years a thousand years of nonlinear history sketches the outlines of a renewed materialist philosophy of history in the tradition of fernand braudel gilles deleuze and felix guatarrari in an unprecedented manner the critical new understanding of material processes derived from the sciences of dynamics working against prevailing attitudes that see history merely as the arena of texts discourses ideologies and metaphors de landa traces the concrete movements and interplays of matter and energy through human populations in the last millennium the result is an entirely novel approach to the study of human societies and their always mobile semi stable forms cities economies technologies and languages de landa attacks three domains that have given shape to human societies economics biology and linguistics in each case de landa discloses the self directed processes of matter and energy interacting with the whim and will of human history itself to form a panoramic vision of the west free of rigid teleology and naive notions of progress and even more important free of any deterministic source for its urban institutional and technological forms the source of all concrete forms in the west s history rather is shown to derive from internal morphogenetic capabilities that lie within the flow of matter energy itself a swerve edition

over 250 old photographs many published for the first time appear in this new collection covering the districts of roath splott and adamsdown this area along with penylan tremorfa and part of cathays once had a collective unity as the ecclesiastical parish of roath created in the late sixteenth century roath as an historical entity is much older however reputed to be pre norman in origin in its time it has served as a manor parish and village as well as a latter day cardiff suburb although earlier centuries are not neglected particular focus is given to the period 1890 to 1950 which saw the emergence and maturity of these communities so familiar to present day cardiffians scenes of streetlife work worship and leisure are captured in a wide variety of often striking and atmospheric images these are amplified by the fascinating historical detail in the captions providing the reader with a vivid appreciation of the richly significant past of this part of cardiff

an evolved civilization existed in india much before the advent of roman greek egyptian or chinese civilizations in this world and yet india is the only country among them which went into subjugation in the last millennium this book gives an insight into its reasons it also

brings out why indians are brilliant individually but collectively they belong to a third world country it dwells on their strength and weaknesses developed over 6000 years which remain unspoken or spoken in disguise also it reflects on the reasons why great men like shiv ganesh hanuman and krishna who were born just like christ mohammed and buddha were consigned into mythology the readers may find much rationality in its bold attempt to reveal the harsh truth it also provides thought provoking solutions to ponder and act

science a four thousand year history rewrites science's past instead of focussing on difficult experiments and abstract theories patricia fara shows how science has always belonged to the practical world of war politics and business rather than glorifying scientists as idealized heroes she tells true stories about real people men and some women who needed to earn their living who made mistakes and who trampled down their rivals in their quest for success fara sweeps through the centuries from ancient babylon right up to the latest hi tech experiments in genetics and particle physics illuminating the financial interests imperial ambitions and publishing enterprises that have made science the powerful global phenomenon that it is today she also ranges internationally illustrating the importance of scientific projects based around the world from china to the islamic empire as well as the more familiar tale of science in europe from copernicus to charles darwin and beyond above all this four thousand year history challenges scientific supremacy arguing controversially that science is successful not because it is always right but because people have said that it is right

as far back as the first century bce chinese dynastic historians all men began recording the achievements of chinese women and creating a structure of understanding that would be used to limit and control them to men these women became role models for their daughters and wives to the few literate women readers they became paradigms for their own behavior thus although these biographies are descriptive by nature they actually became prescriptive gentlemen's prescriptions for women's lives is an enlightening source for studying chinese women of the imperial era as well as for understanding chinese womanhood in general by contextualizing these biographies the author shows us these women not just as the complaisant calm eyed delicate figures that adorn confucian texts but also as the products of the confucian tradition's appropriation of women

the science of the earth and the history of man though cultivated by very different classes of specialists and in very different ways must have their meeting place they must indeed not only meet but overlap and run abreast of each other throughout nearly the whole time occupied by the existence of man on the earth the geologist from his point of view studies all the stratified crust of the earth down to the mud deposited by last year s river inundations the historian aided by the archæologist has written and monumental evidence carrying him back to the time of the earliest known men many thousands of years ago throughout all this interval the two records must have run more or less parallel to each other and must be in contact along the whole line the geologist ascending from the oldest and lowest portions of the earth s crust and dealing for millions of years with physical forces and the instinctive powers of animals alone at length as he approaches the surface finds himself in contact with an entirely new agency the free will and conscious action of man it is true that at first the effects of these are small and the time in which they have been active is insignificant in comparison with that occupied by previous geological ages but they introduce new questions which constantly grow in importance down to those later times in which human agency has so profoundly affected the surface of the earth and its living inhabitants finally the geologist is obliged to have recourse to human observation and testimony for his information respecting those modern causes to which he has to appeal for the explanation of former changes and has to adduce effects produced by human agency in illustration of or in contrast with mutations in the pre human periods the historian on the other hand finds as he passes backward into earlier ages documentary evidence failing him and much of what he can obtain becoming mythical vague or uncertain or difficult of explanation by modern analogies until at length he is fain to have recourse to the pick axe and spade and to endeavour to disinter from the earth the scanty relics of primeval man much as the geologist searches in the bedded rocks for the fossils which they contain he has even learned to use for these earliest ages the term prehistoric and so practically to transfer them to the domain of the archæologist and geologist

this title is a definitive and comprehensive edition of the fragmentary texts of all the roman historians whose works are lost historical

writing was an important part of the literary culture of ancient rome and its best known exponents including sallust livy tacitus and suetonius provide much of our knowledge of roman history however these authors constitute only a small minority of the romans who wrote historical works from around 200 bc to ad 250 in this period we know of more than 100 writers of history biography and memoirs whose works no longer survive for us to read they include well known figures such as cato the elder sulla cicero and the emperors augustus tiberius claudius hadrian and septimius severus page 4 of cover

british modernism and the anthropocene experiments with time assesses the environmental politics of modernism in relation to the idea of the anthropocene a proposed geological epoch in which humans have fundamentally changed the earth system the early twentieth century was marked by environmental transformations that were so complex and happened on such great scales that they defied representation modernist novelists responded with a range of innovative narrative forms that started to make environmental crisis on a

planetary scale visible paradoxically however it is their failures to represent such a crisis that achieve the greatest success david shackleton explores how british modernists employed types of narrative breakdown including fragmentation and faltering passages devoid of events to expose the limitations of human schemes of meaning negotiate the relationship between different scales and types of time produce knowledge of ecological risk and register various forms of non human agency situating modernism in the context of fossil fuel energy systems plantation monocultures climate change and species extinctions shackleton traces how h g wells d h lawrence olive moore virginia woolf and jean rhys undertook experiments with time in their novels that refigure history and the historical situations into which they were thrown ultimately british modernism and the anthropocene shows how modernist novels provide rich resources for rethinking the current environmental crisis and cultivating new structures of environmental care and concern

twenty first century technology is an ever expanding powerful force in virtually every aspect of human life and every corner of the globe so much of modern technology has resulted in positive improvements in communication work health and other domains technology s promises and possibilities for the future are often glowing but it is one thing for technology to function as a tool serving human purpose and flourishing and quite another for it to be granted the position of unquestioned master all technologies deserve to be questioned what are their costs trade offs and potential or real negative impact and how do we create limits and controls for technological invasion when these would be wise and necessary questioning technology with jacques ellul addresses these questions in both the big picture and in their relevance to specific arenas such as art politics work and religion with voices from not just the academy but also the workplace and society
